## E-INVOICING POWERED BY AN INDUSTRY LEADING AI-INFUSED INTEGRATION PLATFORM - **ENSO™**

Seamlessly connect your Concur Invoice solution with your  
PEPPOL e-Invoicing platform.

Drag and drop mapping between your organisation's PEPPOL e-Invoices to your Concur Invoice fields.

Monitor your organisation's traffic and logs between Xaana's access point to your Concur Invoice system.

Receive your organisation's e-Invoices the moment your supplier raises the invoice in their accounting system.

# HOW IT WORKS

1

The PEPPOL e-Invoice is transmitted from the supplier's access point to Xaana's access point.

2

At the Xaana access point, the PEPPOL e-Invoice is validated against the Peppol Billing BIS 3.0 specifications and any client specifications.

3

Enso (Xaana's integration solution) transforms the PEPPOL e-Invoice into an Intermediate Document (iDoc).

4

The iDoc is pushed into Concur Invoice, where the invoice automatically routes to the invoice owner and the normal invoice process follows.
